

PRESENTATION FLOW:

HOW TO TURN A RAW IDEA INTO A WORKING SPECIFICATION DOCUMENT FOR AN AI CODING AGENT

Step 1

Get raw idea from the audience, and explain simple Agentic terms

RAW idea: Note taking app that helps students create notes and lecture summaries from uploaded audio files.

Agentic terms

Agentic coding: Creating website and applications without self writing hard code but by describing your intention to an agent

Agent: A software or program that can interact with its environment, collect data and complete goals; basically what you can talk to to run errands

Prompt: The way you talk to AI

Step 2

Talk about non-negotiables as the anatomy of a good prompt

- Personality :The role you want the AI to assume as it attends to your prompt
- Context: Details and information about your prompt
- Task: The exact thing you want the AI to do
- Constraints: Guidelines and rules you want the AI to follow
- Output format: The manner in which you want the AI to give you feedback

Step 3

Write a prompt to using the non-negotiables to create a refined structured version of the raw idea

Prompt 1

Personality: You are an experienced product designer and product engineer who works with agentic software

Context: Students do not always get clear notes in class or might even miss classes completely. They have access to audio recordings of the class and they want a comprehensive note and summaries from the class. This is my raw idea.

Task: I want you to take my raw idea and refine it into a structured idea.

Constraints: use HTML, CSS, and JS only. Use web storage for persistent data.

Output format: Give me the response in a text block.

Your output should be a refined structured idea

Step 4

Create a PRD from the refined structured idea

Prompt 2

Create a PRD with reference to the structured idea in this chat

Step 5

Read through the first version PRD and remove unnecessary parts

Prompt 3

Remove every unnecessary part of this document and mention what you take out in bullet points. Make this PRD clear, concise and simple.

Step 6

Read through and ask for the updated PRD in a markdown format

Prompt 4

Give me the updated PRD in a markdown

Step 7

Create a master prompt from the PRD

Prompt 5

Create a master prompt from the PRD. Note that the prompt will be given to an Agentic IDE to build this app.
